Mark,

Let me know if this is what you are looking for:

Techlaw's E.S.A.T. (Environmental Sampling Assistance Team) contract operated our mobile laboratory at the Lane Street Site in Indiana as a part of our F.A.S.P. (Field Analytical Support Program) Task Order, under the Superfund, as contractors to Region 5 EPA. The mobile laboratory was deployed at the Elkhart WWTP during this operation. While onsite, we analyzed water and soil samples in our mobile laboratory using GC/MS (Gas Chromatograph with a Mass Spectrometer detector) techniques in order to provide both qualitative identification and quantitative data for volatile organic compounds on a rapid turn around time in support of I.D.E.M.'s effort to track down and identify the source of pollution found in the area. To this end, we provided two chemists for full time analysis in support of this operation. We analyzed seventy seven (77) samples over a six day period in April 2008.

Thanks,

Jim Burden
Team Manager
